

ABSTRACT OF THE DISCLOSURE

This invention creates an internet-based clearinghouse that enables physicians to electronically create, store, modify, view, and transmit prescriptions using the public internet. Additionally the clearinghouse allows the physician, pharmacy, and patient to communicate electronically on matters regarding prescriptions. All data stored in the prescription database will be accessible to registered users. Access is based on security privilege assigned the user by the clearinghouse. Data stored within the clearinghouse will be accessible anywhere an internet connection exists.
